

How to swap GNY ERC-20 Tokens to GNY Mainnet Tokens

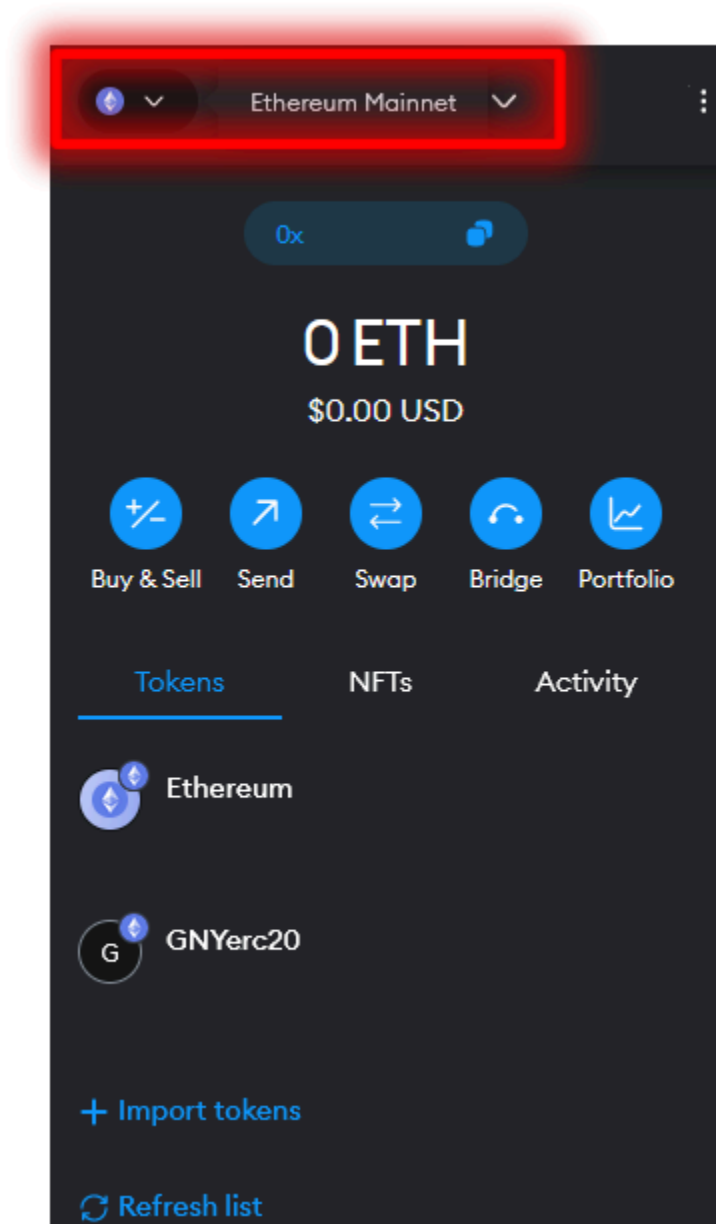

1. Log in to your GNY Web Wallet at <https://wallet.gny.io/#/login> by entering your twelve word GNY passphrase.

Please note that the GNY Web Wallet is currently optimised for desktop viewing only.

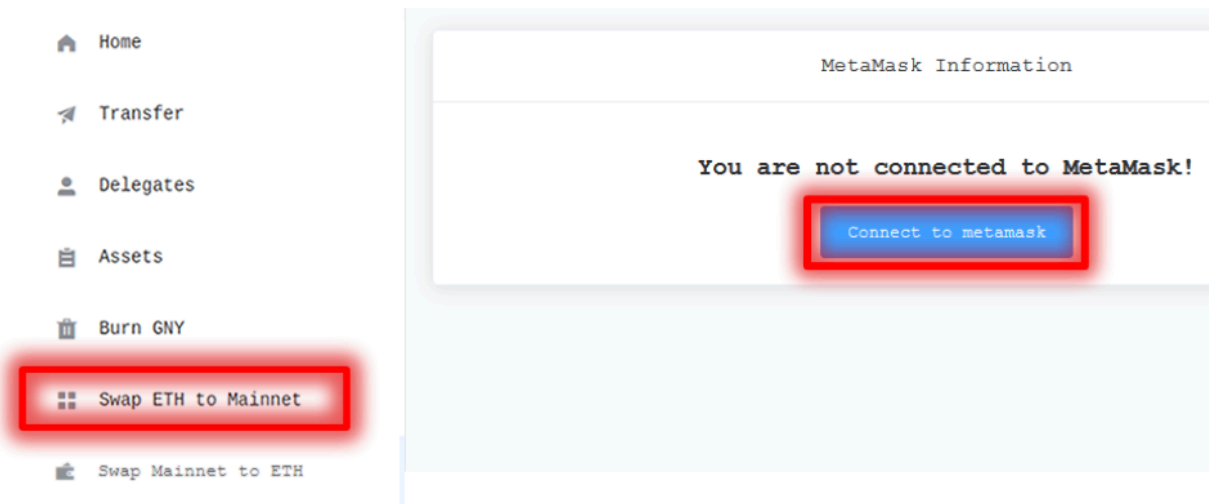

If you do not already have an active GNY wallet then create one by clicking the **New Account** button, then log in.

PLEASE SAVE YOUR PASSPHRASE IN A SECURE LOCATION. If you forget your unique passphrase and do not have it recorded anywhere then you will not be able to access your GNY Wallet or GNY Mainnet tokens. It is impossible for you, the GNY team, or anyone else to log into your account without your passphrase. It is also not possible to reset a forgotten password.

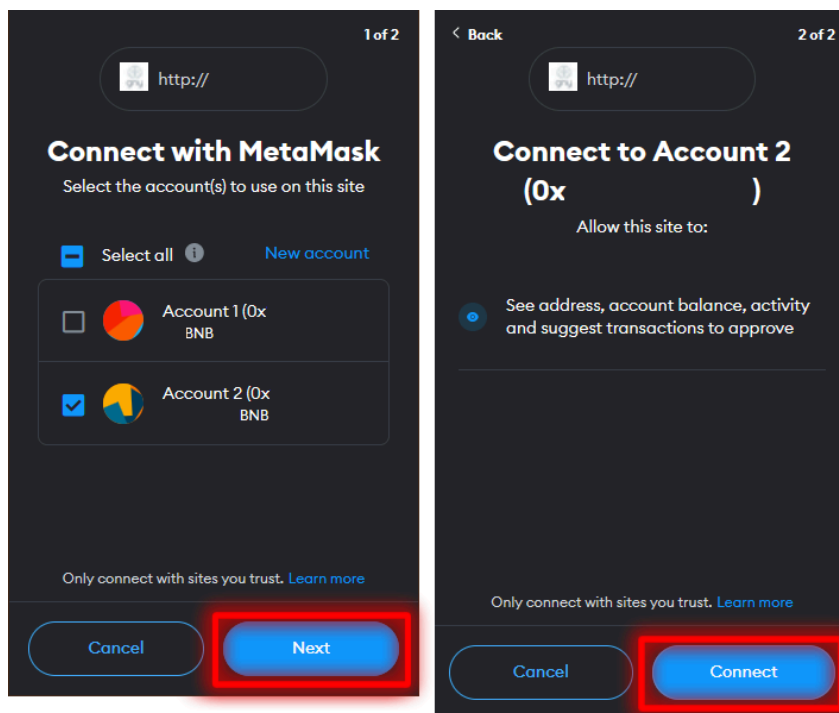

2. Log in to your Metamask wallet. Ensure the network you are connected to is the “Ethereum Mainnet”

3. In the GNY Web Wallet click on the **Swap ETH to Mainnet** button. This will bring up a MetaMask Information message in the Web Wallet stating that “You are not connected to MetaMask!” Click on the **Connect to MetaMask** button beneath this message.

Your MetaMask interface will then display a “Connect with Metamask” screen. If you have multiple accounts it will ask you to select which one you wish to connect with. Select only one account; the account that contains your GNY ERC-20 tokens, then click **Next**. In the follow up screen click **Connect**.

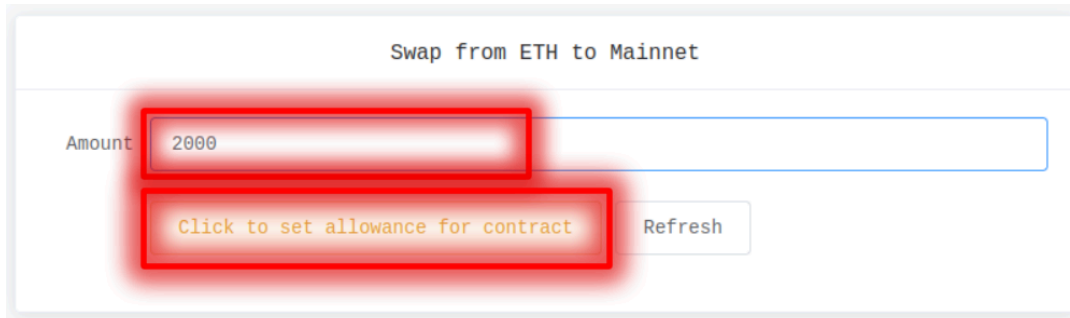

4. Check your GNY Web Wallet and you will see that it has updated with the details of your GNY Mainnet Account Address and the ETH wallet address you have connected to. Satisfy yourself that they are both your selected wallet addresses.

Mainnet Account
Address: Gxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx
Total Balance: GNY

ETH Account
Currently connected to ETH wallet: 0xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx
MetaMask GNY ERC20 balance:xxxxxx ERC20 GNY

5. Begin to enter how many tokens you would like to swap by inputting the number into the "Amount" field. As you do so you will see a button appear labeled "Click to set allowance for contract".

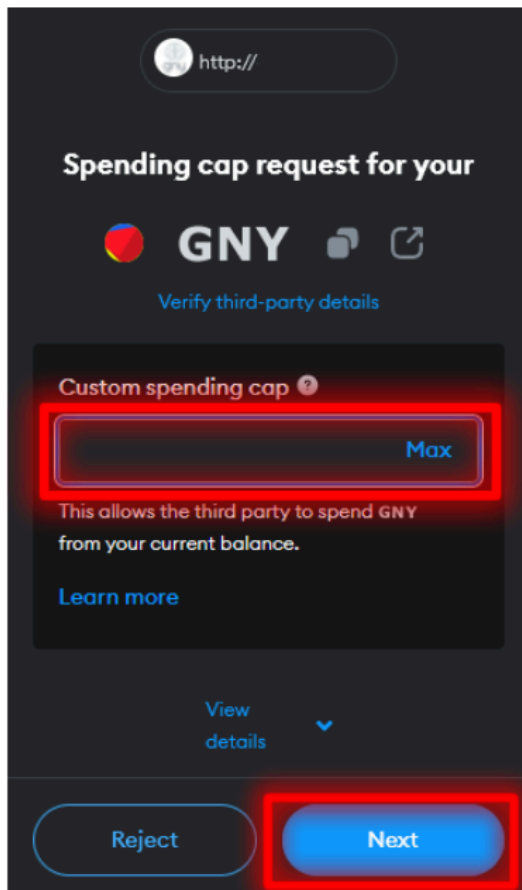

Click on the **Click to set allowance for contract** button and it will bring up the MetaMask interface where as a safety precaution it allows you to set a "Spending cap for your GNY". Enter the number you wish to swap into the "Custom spending cap" field, then click **Next**. You will then be asked to approve the gas fee to set this "Spending cap". Click **Approve** if you accept the fee.

Swap from ETH to Mainnet
